

CPSA Exploration

UMBC Protocol Analysis Lab

June 22, 2026

Begin by navigating to the CPSA manual. You can find the latest version of the manual [here](#). Much of the content in the manual is very complicated, and outside the scope of the workshop. This exploration will highlight some of the important sections of the manual. We encourage you to read “around” the answers to the exploration, since the manual discusses many more analysis techniques than we are able to cover.

1. Who are the authors of the CPSA manual?
2. What organization is behind CPSA?
3. Is there a way to access documentation (this manual) offline?

Hopefully those weren’t too hard. We now have some more involved questions that will hopefully get you thinking more about what the shapes mean.

4. (Section 3.3) What do the blue numbers mean in tree diagrams?
5. (Section 3.4) What does a dashed arrow mean?
6. How can we use the the blue numbers and dashed arrows to find problems? (hint: agreement)

Now let’s inspect some of the features that make up the *algebra*

7. What are the two types of algebras included in CPSA? Which one is better?
8. How can we model key exchanges that are out of scope of our CPSA analysis?
9. When does CPSA “delete” a strand or listener?
